

BIO

A strategic, hands-on Designer with a background in physical and digital product development. I specialise in mapping complex systems, orchestrating end-to-end journeys and aligning cross-functional teams around user/business needs. Excelling in the knotted and murky world of discovery & 0 to 1 Products

I bring a human-centred approach to service/product innovation—drawing on deep experience in discovery research, stakeholder facilitation, and iterative prototyping. Comfortable navigating ambiguity and complexity, I design products & services that are accessible, inclusive & help users complete their goals effectively.

I bring an empathetic, adaptive, technical lens and results-driven approach to every project. My leadership style emphasises candid problem-solving discussions and mentorship.

KEY ACHIEVEMENTS

- Defined a data-informed feature strategy that shaped the service experience for connected robotic products across global markets.
- led the end-to-end product definition and delivery of a novel Vacuum cleaner product, contributing to a £50m revenue product line.
- Holder of 11 global patents, contributing to Dyson's innovation portfolio.
- Released 5 market leading products, impacting market presence positively.
- Successfully led a team of 10 cross-discipline engineers, scaling user-centred methods and fostering collaborative design thinking practices.

CERTIFICATIONS

- Workshop Facilitation Training (6 week with Industry of Us)
- Getting started with AI - Open University
- Japanese (Beginners) - Bristol City College

WHEN I'M NOT AT WORK

- Maker, Builder, Tinkerer** - I usually have at least 3 projects on the go, ranging from woodworking, leather crafting & repairing vintage record players.
- World Traveller** - I have visited 33 countries and counting.
- Lover of music & gigs** - Always happy to talk music, even named my dog after my favourite record label (Stax Records)

WHERE TO FIND MY WORK

EXPERIENCE

Senior User Experience (UX) Designer

Dyson (Global Connectivity) March 2024- Present

- Led discovery and service definition phases for features within the MyDyson ecosystem, including product automations and robotic cleaning routines.
- Conducted ecosystem mapping, stakeholder interviews, and user research to frame user journeys and identify service touchpoints.
- Translated research insights into interaction flows and prototypes, facilitating co-creation sessions with engineers and product managers.
- Worked within an Agile framework, emphasizing cross-discipline collaboration & efficient delivery structures.
- Successfully delivered multiple high-impact features that enhanced user satisfaction and engagement metrics from data driven Personas, journey maps & research insights.

Lead Design Engineer / UX Designer

Dyson (Robotics) 2022 - 2024

- Invited into the role to define the experience for a robot 'homecare assistant' & in Home task strategies (cleaning, moving objects etc).
- Applied user-centred design and system thinking to shape a multi-modal service (robotic, mobile, human support).
- Utilising my technical background in design engineering and history of user focused problem solving to form data-driven decisions for product functionality & capabilities for the robot platform.
- Developed foundations of information architecture, Lo-fi prototypes & completed Usability testing for cleaning & tidy tasks.
- Pivoted to a team/product leadership role to deliver the next generation of floor cleaning robots.
- Transitioned into a leadership role, establishing feature/service roadmaps, orchestrating cross-functional delivery teams, and mentoring designers on holistic design & service thinking.

Grad ->Senior Design Engineer

Dyson (NPI Floorcare) 2013 - 2021

- I was responsible for end to end product innovation & delivery of novel floor cleaning technologies & products. A professional highlight was working end-to-end on delivering 'omni-glide' with personal involvement in every step of the product delivery.
- Deployed internationally (Malaysia & Singapore) to ensure engineering readiness and successful market launch.
- Led design sprints and co-creation workshops to align teams on goals and generate ideas for innovation in product & delivery systems.

EDUCATION

- Google UX Design Diploma:** Coursera (2021)
Increasing knowledge base on digital design skills & tools
- Product Design BSC:** Loughborough University (2009/2013)
A broad foundation in Product Design covering User Centred Design theory, Prototyping & Manufacture, Inclusive Design, UX Design & CAD Techniques.

SKILLS

- Service Blueprinting & Journey Mapping
- User Research & Insight Synthesis
- Journey Mapping & personas
- Workshop Facilitation & Stakeholder Engagement
- Information Architecture
- Cross-Functional Collaboration
- Agile & Iterative Methods
- Mentorship / Coaching
- Accessibility & Inclusivity (WCAG)
